

15 - GRK Fasteners

- A screw or fastener for every job
- Stainless steel and Climatek coating resist corrosion
- Patented thread designs
- Eliminate pre-drilling lag bolts
- Star drive – maximum torque
- Code approved for ACQ
- Color-coded drive bits
- Handy-Pak, Pro-Pak and Bulk packaging

Cabinet Screws

Cabinet screws are designed for use in cabinet construction and installation. The screws are thin enough to prevent most material splitting while providing sufficient strength to guarantee a secure installation. The washer head design presses flush against any cabinet surface. Cabinet screws are self-tapping, have the w-cut thread design, are Climatek coated and are ideal for vinyl siding in addition to cabinets.

Kameleon

Composite Deck Screws

Kameleon composite deck screws have fiber-trapping rings, W-cut thread design, Zip-tip, CEE threads and are Climatek coated. The under-head has saw-blade like cutting teeth that cut a perfectly clean hole into the decking. The CEE thread feature enlarges the screw hole allowing the composite decking to settle easily and increases the screws drawing strength and reduces friction on the shank which can result in lowering the driving torque.

R4

Multi-purpose

Climatek

R4 is a multi-purpose screw that is self-tapping, has a countersink head, W-Cut thread design, CEE Thread, Zip-Tip and is Climatek coated. For use in wood, particle board, cement fiberboard, plastic, sheet metal, etc. The under head design allows for countersinking into even the most brittle surfaces. The screw head closes the hole off with precision, leaving no damaged fibers around the head.

Vinyl Window Screw

Jamb Adjustment Screw

Climatek

Vinyl window screws have a patented Washer Head Design, W-Cut thread design and are Climatek coated. The special edge under the screw head captures the vinyl wall material at penetration time. After drilling a larger "working hole", the screw "hooks onto" the inner wall allowing adjustment in and out from the wood frame or rough opening.

RSS

Structural

Climatek

RSS screws are made of especially hardened steel to provide you with high tensile, torque and shear strength. The sharp threads and points bite instantly into the material (including hardwood), reducing the splitting effect due to smaller shanks. The #30 star drive will deliver approximately 650 lbs. of energy, eliminating the need to drill a pilot hole as with most types of lag screws.

Trim

Finish

Climatek

Trim Head screws are an excellent choice for most fine carpentry applications as well as window extension jambs. These screws have the smallest screw head available and come in sizes from 1-1/4" to 5" in length. Pre-drilling is only necessary if the building material's limitations require a pilot hole to be drilled, as in hardwoods like Mahogany, Ipe, etc. The Reverse Thread feature is found on screws from 2" to 3-1/8" in length.

Trim

Reverse Thread

Climatek

The Reverse Thread Composite screw is similar to the FIN Trim in most ways and has an additional set of reverse threads near the top. Recommended for most composite decking applications.
