MISCELLANEOUS

The “EC” prefix, as a moulding pattern identifier, is the trusted symbol of high quality and consistent shapes within the millwork industry.

EastCoast[®]
Mouldings

The “EC” prefix was developed by EastCoast Mouldings as a way to create consistent standards and efficiency for modern mass production, while maintaining the highest quality.

Each profile is crafted with precision and the latest digital technology to be architecturally correct. This assures that each profile is recreated with quality, consistency and exact detail, allowing profiles to accurately match in the future for homeowners to easily repair or remodel the moulding profiles in a home.

More than 1,000 different moulding profiles are offered by EastCoast Mouldings.

Note: This catalog is produced to assist dealers, builders, architects, designers and home owners in choosing the moulding patterns best suited for almost any application. An end view of each profile is shown in full scale.

What is GEARScan?

Notice the use of a special, patent pending GEARScan barcode next to all the moulding profiles throughout this catalog. These unique barcodes will also be added to other forms of literature, displays and samples.

Users of our ECMDGears mobility app will be able to scan this code and get a real time display of the items associated with that profile showing the dealer's price without requiring each item to be selected individually.

ECMDGears users can view the availability of those related items and easily convert it into an order.

Moulding Tips & Suggestions

The most visually pleasing crown and base mouldings are applied in proportion to the ceiling height.

Suggestions for 8 ft. ceiling heights

- 2-1/4 in. - 3-5/8 in. crown mouldings
- 3-1/4 in. - 5-1/4 in. base mouldings

Suggestions for 9 ft. ceiling heights

- 4-1/4 in. - 5-1/2 in. crown mouldings
- 4-1/4 in. - 6-1/8 in. base mouldings

Suggestions for 10 ft. ceiling heights

- 5-1/4 in. - 7-1/4 in. crown mouldings
- 5-1/4 in. - 9-1/4 in. base mouldings

Greater than 10 ft. ceiling heights

- Lots of opportunities for compound crowns and bases to achieve the desirable look. Again, scale the dimensions proportional to the living space.

Door and window casings are influenced by the ceiling heights but are also selected according to door heights.

- Door heights of 6 ft. 8 in. - 2-1/4 in. - 3-1/2 in. casing
- Door heights of 7 ft. - 2-1/2 in. - 4 in. casing
- Door heights of 8 ft. - 3-1/2 in. and larger

Base caps offer a decorative transition from the S4S base to the wall. Base caps are also commonly used to design wainscoting panels for less expense.

Chair rails should be installed at the height to protect the wall at the height of your chair back. Decoratively, chair rails break up a room creating an opportunity for multiple color schemes or panel options.

Picture mould was historically used to hang pictures from when walls were plaster and difficult to drive nails into. Today, picture moulding is frequently used as an extension of the crown, enhancing the wall treatment.

Moulding designs should complement the architectural design of your home and your furnishings.

Below is an illustrated guide with suggestions on how to pair mouldings best suited for the dimensions of a room.

8 ft. Ceiling with a 6 ft. 8 in. Door

9 ft. Ceiling with a 6 ft. 8 in. Door

10 ft. Ceiling with a 7 ft. Door

12 ft. Ceiling with an 8 ft. Door
