# EXPRESS MOUNT BRACKETS™

It's now easier than ever to expand your view. Express Mount Brackets drastically reduce cable railing installation time by eliminating the need to drill holes through wood posts. The Express Mount Brackets are compatible with 102 and 224 cable kits and work for both level and stair railing applications.

- Retrofits on new or existing wood posts, both level and stair applications
- Save Time- Brackets install on the exterior face of the post, no drilling through posts required
- Save Money- Ability to turn a single corner post with a continuous run cuts down number of cable kits
- Patent pending design backed by a Limited Lifetime Warranty

RailFX  
CABLE BRACE

2x2  
WOOD PICKET

**NOTE:**  
Cables must be supported in some manner every 4'. If post spacing is greater than 4', we recommend installing a RailFX cable brace with pre-drilled holes or a 2x2 wood picket with Express Mount Intermediate Brackets. If using a 2x2 wood picket and Express Mount Intermediate Brackets, you will need to use shorter screws than those provided.
